What is it?

A Premium dedicated support platform

iView Learning is an e-Learning platform built to enhance students productivity and reduce stress in their studies. Including over 2,500 quick tutorials on AT, interactive lessons, and downloadable PDFs compatible across Windows, Chrome Mac OS and smartphones for iOS and Android.

In addition to the comprehensive Assistive Technology material available, the platform also offers essential application support for Microsoft Office and Google Workspace and provides comprehensive Accessibility tutorials for both Windows and Apple Desktop and Tablet platforms.

Who can the platform benefit?

Specific Learning Differences

Dyslexia

Poor memory recall is a key characteristic of the dyslexic brain. This means that while students may appear to understand things well, they oftenstruggle to recall concepts later. Think of memory as a warehouse full ofknowledge. A dyslexic searches for the knowledge with the light off.

ADHD

Research shows that people with ADHD may have impaired short-term (working) memory, leading to difficulty remembering information or completing tasks requiring focus. They also often perform poorly on long-term memory tests.

Anxiety

Given the link between anxiety and stress, both long-term and short-term anxiety can impact memory. Anxiety can cause forgetfulness, leading to short-term memory loss and a general inability to remember things.

Dyspraxia

The key feature of dyspraxia is difficulty with coordination, but it can also involve problems with organisation, memory, concentration, and speech. It affects how the brain processes information, leading to incomplete or improper transmission of messages.

What is it?
Common Scenario

A student, who received AT software and attended all four 2-hour training sessions in their first term, now has an essay due in their second term. They have been using mind-mapping software to create the documents and need to export the text and references to Microsoft Word, a process they learned during training. Students cannot remember how to do the task and they are starting to experience stress!

Studies show humans forget over 40% of new information within 1 hour of learning it

That rises to an average of 70% within 24 hours

Time Saver

Learn with ease
Our App

iView Learning is the UK's only support app dedicated to helping students with disabilities use Assistive Technology effectively.
Students benefit from over 2,500 video tutorials accessible via a mobile app, allowing them to follow instructions and solve problems in real-time on their computers, without the hassle of switching screens. This feature sets iView Learning apart from other AT support platforms.

For DSA Assessors, recommending iView Learning means offering a specialised solution that enhances students' academic experiences and fosters greater independence.
